2. Work has progressed on the reduction in overall size of the kit. The card size has been made  $4\frac{1}{2} \times 5\frac{1}{2}$  inches from 5x7 inches without reducing the size of the facial characteristics. Experience with the prototype kit has indicated the desirability of adding several new characteristics such as: round glasses, a cleft and dimple for the chin, a crewcut, a goatee and mustache, etc. The opaque white on the chin cards will be omitted as it is felt that this will produce a clearer picture. A grid will be provided to specify the location of scars.

3. Delivery of the 25 large kits and 10 playing card size units is expected during September 1957. The original kit is available on a few days notice by contacting [ ] extension [ ]
